Business Pain-Points

- Customer needs to buy new servers or look for other options to replace current servers
- They have considered to move their environment to Cloud infrastructure
- They require 4 servers in their environment as a start
- Need Hyper-Converged Infrastructure that can continue utilizing existing storage, like SAN or NAS
- Need 3rd-party servers so that they can choose (they chose Dell Server in this case)

Sangfor aCloud Solution

- Dell x86 servers-DellR740xd to build one cluster. Maximum can be extended up to 64 servers in one cluster
- 8 sets software licences of aSV and aSAN for virtualization
- Continuous Data Protection to protect 5 VMs for critical applications
