WAN OPTIMIZATION FOR BANKING INDUSTRY

Financial industry is an industry where application reliability and high performance over wide area network (WAN) across multiple sites are considered crucial. There are also the needs of regulatory compliance and business continuity that must be satisfied.

BUT THE REALITY IS...

Core Banking System

Slow; can't assign priority

File Transfer

Slow; frequent disconnection; occupy lots of bandwidth

Email

Slow; low work efficiency

HTTP

Long page loading time; poor user experience

VSAT

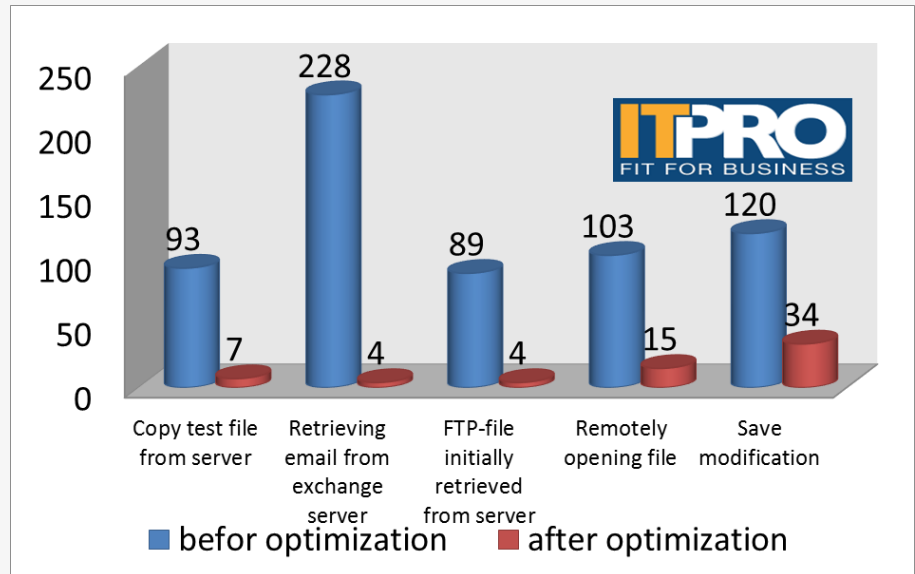

Expensive; limited bandwidth

DC-DRC

Long backup time; occupy lots of bandwidth

Have a LAN Speed on Your WAN

Reduce Cost & Increase Productivity and Profit

WANO has advantages in using bandwidth management and application proxy to guarantee core business systems and VC traffic, limiting other low priority applications and let customers know their network better; using HTP (UDP) to reduce packet loss rate and optimize quality of video conference; as well as using byte cache and compression technology to accelerate file transfer and increase output.
